

The "One Health Approach for Conservation" (OHAC), Gorilla Health project is implemented with the mandate to support the integrated conservation of non-human primates through monitoring, interventions, capacity building, research and raising awareness.

Ensure the survival in One Health ecosystem of human, livestock and the wildlife including the mountain gorilla. Through animal health care, research, training, consultation and advocacy for conservation

Science tourism is a travel topic grouping scientific attractions. We would like to bring you in the field where scientific knowledge is preserved, communicated from generation to generation.

We provide for tourists and visitors, a one-hour power point presentation focusing on our work in conservation areas, on the care of the famous mountain gorilla in the Virunga Massif and works in other National parks. We organize as well a full package with the client: a PowerPoint presentation and a field visit during the mountain gorilla trekking.

This project is based on two of our nine main OHAC/ Gorilla Health objectives namely:

1. Create "One Health Approach" and "Conservation" awareness program
2. Capacity Building and continuous professional development training for veterinarians, para-medical personal, park staff, tourist agency guides and visitors

The world of science is a part of the whole. You can have really unforgettable science holidays for your tourist. This new product intends to sensitize more wildlife friends on the benefit of conservation for sustainable tourism activities in Africa.

OHAC/ Gorilla Health is an independent entity; our budget comes from donations and conservation support funding
